## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-48 and 59-64 are drawn to an apparatus having inverter for supplying a power to a gas discharge lamp, classified in class 315, subclass 209R.
- II. Claims 49-58 are drawn to a control circuit utilized communication ports for controlling a gas discharge lamp, classified in class 365, subclass 230.05.
- III. Claims 65-69 are drawn to method for energizing a gas discharge lamp by sampling command signals, classified in class 375, subclass 220.

1. Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed in invention I does not require the particulars of the subcombination as claimed in inventions II or III for patentability, and (2) that each subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed in the invention I does not require the particulars of the subcombinations as claimed in the inventions II or III because a discharge lamp is controlled by a processor for controlling a level of a ballast output signals obtaining via input terminals and does not require a specific arrangement of terminal ports as claimed in the invention II or needs a method to sample the control signals as required in the invention III. The subcombination as in the invention II has separate utility such as providing commands via terminal ports for controlling lamp's behavior while the claims in the invention III utilizes a sampling technique toward control signals for functioning the lamp's intensity.

2. Because these inventions are distinct for the reasons given above and the search required for each group of the inventions is different from each other, restriction for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Art Unit: 2821

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
